

WHY PRIME WITH DUNLOP MULTI-PURPOSE PRIMER?

→ Controls surface porosity, preventing it from absorbing too much moisture from the cement based tile adhesive or levelling compound.

→ Optimized product performance - ensures that the levelling compound or adhesive performs as intended, meeting product specifications.

→ Increases the open time of cement based tile adhesives meaning less waste.

→ Improves the wet edge of levelling compounds.

→ Protects from reactions such as ettringite formation in tiling projects.

→ Prevention of pin holes by reducing the chance of air trapped under the levelling compound.
